

Being a Professional Mathematician

Mathematics: a static body of knowledge? – worksheet

- 1) Do you regard mathematics as an essentially static, already worked out, body of knowledge or as a developing subject in which new discoveries are being made?

Has your view changed during your degree studies?

- 2) Identify mathematical topics from your degree which were developed to their present level:

- Before 1600
- In the seventeenth century
- In the eighteenth century
- In the nineteenth century
- In the first half of the twentieth century
- In the second half of the twentieth century
- In the 21st century

Can you identify mathematical ideas you have come across during your studies that were not known ten years ago?

If not, is this because there are no mathematicians working today or because it takes time for new ideas to reach the university curriculum?

- 3) Where are mathematicians creating new mathematics?

Of the mathematicians interviewed in the case studies at www.BeingAMathematician.org which ones say they are creating new mathematics?

Do you think the others, who are generally being paid to solve problems that no-one has solved before, are not creating new mathematics, then what are they doing?

How do mathematicians disseminate their work? (Many of the interviews talk about this.)

Why does it take new ideas so long to reach the University curriculum?

Find recent news stories about mathematics. How do they present the mathematics? Do the reporters get it right?

Would a non-mathematician appreciate, from their school education, from news coverage, or from other sources, that mathematics is a living subject in which new discoveries are being made?

Why do we not often read about new mathematical ideas in the newspapers? (Mason Porter talks about this in the interview at www.BeingAMathematician.org, at 8:39).

How is mathematics presented at the annual British Science Festival ([//www.britishecienceassociation.org/web/britisheciencefestival/](http://www.britishecienceassociation.org/web/britisheciencefestival/))?

Why do you think there are relatively few presentations about new discoveries in pure mathematics at this Festival?

This worksheet was created by Tony Mann and Chris Good in 2012 for the project "Being a Professional Mathematician", supported by the MSOR Network, the Institute of Mathematics and its Applications and the Universities of Greenwich and Birmingham as part of the National HE STEM Programme. It is released under a Creative Commons Attribution-NonCommercial-ShareAlike licence. The project materials are available at www.BeingAMathematician.org.
